Passport GMID: How to Access Statistics
http://business.library.emory.edu/research-learning/databases/gmid.php

This database contains industry, trade, economic and more data for countries and regions around the world. The data goes back to 1977 and forecasts to 2030+ – although not every data item is available for each country for each year. All data can be downloaded to Excel.

1. At the Passport GMID home page, click GO in the Search Full Tree box.

2. You can now begin selecting the data points (e.g. categories) and geographies for your customized spreadsheet.

3. The Categories/Topics include Industries and Economics & Consumers.
   - Take the time to browse and scroll down and expand (+) the categories to view all the data that is available.
• Notice the icon to the far right of some categories; clicking on this will automatically select all of the subcategories related to its broader category.
• You can also **keyword search** to locate all matching keywords across all of the categories.
  - TIP: We recommend combining keyword searching and browsing to ensure you do not miss useful data.

**Type a specific category or topic to filter the available items**

- gdp

4. Once you have selected all of your data points, click **Next** at the bottom right of the page.
5. **Geographies** – select all relevant regions, countries, or economic regional groups (e.g. BRIC, APEC, etc.)
6. Click the **Search** button on the upper right corner to generate your spreadsheet.
7. Click on the link to data beneath **Popular Statistics** on the returned page.

**POPULAR STATISTICS**

8. Your data will display; now it is time to adjust your dates and convert all local currencies to USD.

**Statistics**

- The most recent 6 years is the default.
• Click **Change Time Series** to change the dates
  - The data goes back to 1977 and forecasts to 2030+
  - Note that not all of the data is available for each of the countries/regions I selected. This is an excellent example of why you need to begin running some of these data searches even in the proposal stage, so that you can make any adjustments (different countries, different data items) early on in the research process.
• Click **Convert Data** to standardize any data reported in currencies (e.g. USD, etc.).
• Do each step one at a time
• Click **Apply** after each step.

9. **Downloading data into Excel.**
• Click on the download icon on the upper left corner of the page.
